Image Composite Editor

What is Image Composite Editor?

Microsoft Image Composite Editor is an advanced panoramic image stitcher. Given a set of overlapping photographs of a scene shot from a single camera location, the application creates a high-resolution panorama that seamlessly combines the original images. The stitched panorama can be shared with friends and viewed in 3D by uploading it to the [Photosynth](#) web site. Or the panorama can be saved in a wide variety of image formats, from common formats like JPEG and TIFF to the multiresolution tiled format used by Silverlight's [Deep Zoom](#) and by the [HD View](#) and [HD View SL](#) panorama viewers.

New features in version 1.4.4

- Stitch directly from a video (only on Windows 7)
- Automatic lens vignette removal
